**Subject:** Toxicological Evaluation of Results from an Ambient Air Sample for Volatile

Organic Compounds Collected Downwind of Vantage Fort Worth Energy LLC-LABC Site (Latitude 32.695173, Longitude -97.183546) in Arlington, Tarrant

County, Texas

Sample Collected on December 29, 2015, Request Number 1601002 (Lab Sample

1601002-001)

## **Key Points**

• Reported concentrations of target volatile organic compounds (VOCs) were either not detected or were detected below levels of short-term health and/or welfare concern.

## **Background**

On December 29, 2015, a Texas Commission on Environmental Quality (TCEQ) Region 4 air investigator collected a 30-minute canister sample (Lab Sample 1601002-001) downwind of Vantage Fort Worth Energy LLC-LABC Site in Arlington, Tarrant County, Texas (Latitude 32.695173, Longitude -97.183546). The sample was collected in response to a hand-held VOC reading. The investigator experienced a moderate brine odor but no health effects while sampling. Meteorological conditions measured at the site or nearest stationary ambient air monitoring site indicated that the ambient temperature was 45.2°F with a relative humidity of 50%, and winds were from the southwest at 1.2-2.7 miles per hour. The sampling site was approximately 50 feet to the west of the possible emission source. The nearest location where the public could have access was approximately 190 feet west of the possible emission source (natural gas production). The sample was sent to the TCEQ laboratory in Austin, Texas, and analyzed for a range of VOCs. The list of the target analytes that were evaluated in this review is provided in Attachment A. The VOC concentrations were reported in parts per billion by volume (ppbv) (Attachment B and Table 1). Please note that the available canister technology and analysis method cannot capture and/or analyze for all chemicals.

Tony Walker et al. Page 2 January 27, 2016

#### **Results and Evaluation**

Reported VOC concentrations were compared to TCEQ's short-term health- and/or welfare-based air monitoring comparison values (AMCVs) (Table 1). Short-term AMCVs are guidelines used to evaluate ambient concentrations of a chemical in air and to determine its potential to result in adverse health effects, adverse vegetative effects, or odors. Health AMCVs are set to provide a margin of safety and are set well below levels at which adverse health effects are reported in the scientific literature. If a chemical concentration in ambient air is less than its comparison value, no adverse health effects are expected to occur. If a chemical concentration exceeds its comparison value it does not necessarily mean that adverse effects will occur, but rather that further evaluation is warranted.

All of the 84 VOCs were either not detected or were detected below their respective short-term AMCVs. Exposure to levels of VOCs measured in this sample would not be expected to cause short-term adverse health effects, adverse vegetative effects, or odors.

Please call me at (512) 239-0154 if you have any questions regarding this evaluation.

### Laboratory Analysis Results Request Number: 1601002

Analysis Code: AP001VOC

#### Qualifier Notes:

ND - not detected NQ - concentration can not be quantified due to possible interferences or coefutions.

SDL. - Sample Detection Limit (Limit of Detection adjusted for dilutions).
SQL - Sample Quantitation Limit (Limit of Quantitation adjusted for dilution).
DV - Invalid.

J - Reported concentration is below SDL.

L - Reported concentration is at or above the SDL and is below the lower limit of quantitation.

B - Reported concentration exceeds the upper limit of instrument calibration.

M - Result modified from previous result.
T- Data was not confirmed by a confirmational analysis. Compound and/or results is testatively identified.

F - Established acceptance criteria was not met due to factors outside the laboratory's control.

H - Not all associated hold time specifications were met. Data may be biased.

C - Sample received with a missing or broken custody suid.

R - Sample received with a missing or incomplete chain of oustody I - Sample received without a legible unique identifier.

G - Sample received in an improper container

U - Sample received with insufficient sample volume.

W - Sample recevied with insufficient preservation.

Quality control notes for AP001VOC samples,

D1-Sample concontration was calculated using a dilution factor of 4.

D2-Sample concentration was calculated using a dilution factor of 67.8.

<sup>\*</sup>A simple asphyxiant displaces air, lowering the partial pressure of oxygen and causing hypoxia at sufficiently high concentrations. ppbv - Parts per billion by volume.

ND - Not detected.

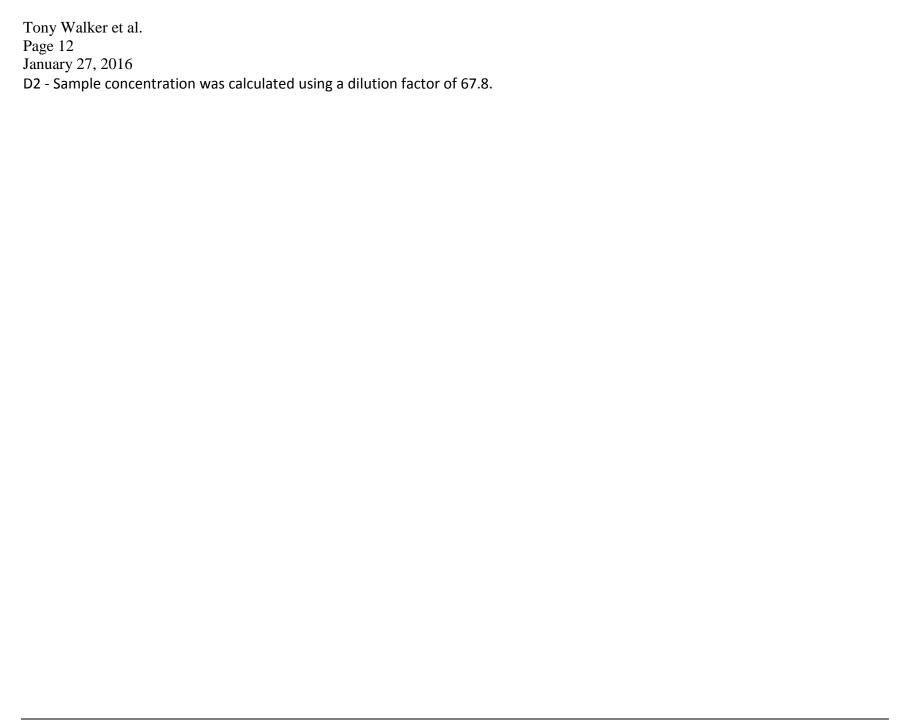

NQ - Concentration can not be quantified due to possible interferences or coelutions.

SDL - Sample Detection Limit (Limit of Detection adjusted for dilution).

SQL – Sample Quantitation Limit (Limit of Quantitation adjusted for dilution).

INV - Invalid.

- J Reported concentration is below SDL.
- L Reported concentration is at or above the SDL and is below the lower limit of quantitation.
- E Reported concentration exceeds the upper limit of instrument calibration.
- M Result modified from previous result.
- T Data was not confirmed by a confirmational analysis. Data is tentatively identified.
- F Established acceptance criteria were not met due to factors outside the laboratory's control.
- H Not all associated hold time specifications were met. Data may be biased.
- C Sample received with a missing or broken custody seal.
- R Sample received with a missing or incomplete chain of custody.
- I Sample received without a legible unique identifier.
- G Sample received in an improper container.
- U Sample received with insufficient sample volume.
- W Sample received with insufficient preservation.
- D1 Sample concentration was calculated using a dilution factor of 4.
